

## SUBSTITUTE SPECIFICATION

SN. 10/800,408

## ABSTRACT OF THE DISCLOSURE

A combined structure of a front part of a cabin of an automobile has a dash panel and a front pillar. The dash panel is placed in the front part of the cabin, extending in the width direction of an automobile, and forms a tire house bulged inward of the cabin at both left and right lower sides. The dash panel has a panel flange extending rearward from the both edges. The front pillar is formed by a front pillar inner and a front pillar outer joined at pillar flanges where they are faced each other in the width direction. In the front pillar, the pillar flanges extending in the forward of vehicles are joined to the panel flange. The front end of the pillar flange is located more rearward than the edge of the dash panel.
